Technique

Normal Marker Locating Mode

1. Attach EML accessory to the receiver.
2. Plug the EML cable into the receiver accessory connector.
3. Select marker type using the Frequency key.

IMPORTANT: Test unit for proper operation by passing the wand 3' (1 m) over a marker. Signal strength should increase and the bar graph should close.

4. Walk over area where you suspect a marker has been buried. Hold EML accessory close to the ground and move it from side to side. Move in the direction of increasing signal strength. Adjust gain as needed. Marker is located where receiver indicates maximum signal.
5. To locate next marker, adjust gain to 30 dB and repeat process.

Search Mode

If unsure about what markers are in the area, use Search Mode to locate all frequencies. After scanning for each frequency separately, the receiver displays the location information for the marker with the highest signal. Up and Down keys will adjust gain in this mode.
